

Group 2

1. 2540127181 – Devin Luize Saan
2. 2540126550 – Vincentius Jericho
3. 2540126784 - Effel Zefanya Shuban
4. 2540127111 – Krisna Wira Indrawan
5. 2540126481 – Harvey Christiawan
6. 2502007483 - Jason Winata Kusuma

How:

- Create a Laravel Project in your desired directory
- Create a routing function that leads to another page. Inside that routing function, adds an array and return it.

```
9 |-----|
10 |
11 | Here is where you can register web routes for your application. These
12 | routes are loaded by the RouteServiceProvider and all of them will
13 | be assigned to the "web" middleware group. Make something great!
14 |
15 */
16
17 Route::get('/', function () {
18     return view('welcome');
19 });
20
21 Route::get('/about2', function () {
22     $dataArray = ['2540127181 - devin Luize Saan',
23                 '2540126784 - Effel Zefanya',
24                 '2540126481 - Harvey Christiawan',
25                 '2540126550 - Vincentius Jericho',
26                 '2540127111 - Krisna Wira indrawan',
27                 '2502007483 - Jason Winata'];
28     return view('about', ['data'=>$dataArray]);
29 });
```

- In the view page, create a code to output the array from routing. Here's the code snippet:

The screenshot shows the Visual Studio Code editor interface. The Explorer sidebar on the left displays the project structure for 'tugas_session_2_web_prog'. The main editor area shows the content of 'resources > views > about.blade.php', which is an HTML template. The code includes a DOCTYPE declaration, HTML lang attribute, a head section with meta tags for charset, viewport, and compatibility, and a body section. The body contains a link to 'style.css', an h1 tag for 'Kelompok 2', a foreach loop for displaying data, and an image tag for '260079.jpg' with specific width and height attributes. The status bar at the bottom indicates the current line is 22, column 8, with 4 spaces, UTF-8 encoding, and LF line endings.

```
1 <!DOCTYPE html>
2 <html lang="en">
3
4 <head>
5     <meta charset="UTF-8">
6     <meta name="viewport" content="width=device-width, initial-scale=1.0">
7     <meta http-equiv="X-UA-Compatible" content="ie=edge">
8     <title>Document</title>
9 </head>
10
11 <body>
12     <link rel="stylesheet" href="{{ asset('style.css') }}">
13     <h1>
14         Kelompok 2
15     </h1>
16     @foreach ($data as $item)
17         <p>{{ $item }}</p>
18     @endforeach
19     
20 </body>
21
22 </html>
```

- Here's the result
